Pervasive care and chronic disease management to reduce institutionalization is a priority for most western countries. The realization of next generation ubiquitous and pervasive healthcare systems will be a challenging task, as these systems are likely to involve a complex structure. Such systems will consist of various devices, ranging from resource-constrained sensors and actuators to complex multimedia devices, supporting time critical applications. This is further compounded by cultural ...

PDAs are no longer just cute little gizmos to keep track of appointments and to-do lists. As these small computers become more powerful with every generation, the possibility of their being really useful in a meaningful way is also increasing. The medical campus of Virginia Commonwealth University has had a keen interest in handheld technology for a number of years, and there have been numerous projects developed that involve PDAs. The number of commercial and shareware health related applications ...
